

ChapterWork Quick Start Guide

- Install ChapterWork in your Applications folder and launch the application.
- From the File menu, select “New Project from File...” to load a movie for editing.
- To the left of the Main Window is the Chapter Track Pane. The top section is for creating new Chapter Tracks. The lower section lets you set markers within the chapter track selected in the upper pane.
- To the right of the Main Window is the movie preview, movie controller and time code.
- To add new Chapter Tracks, click the “+” at the top right of Chapter Tracks pane. To remove a track, select the track and press the delete key.
- Controls for various track attributes (e.g., language, etc.) are positioned below the listing of Chapter Tracks.
- To create chapters within a Chapter Track, use the movie controller to locate the segment of the movie you would like to mark, then click the “+” button below the Chapter Markers Section. To change the time mark, select the chapter you would like to change; use the movie controller to select a new time mark, then click the clock button under the Chapters Pane to update the time mark.
- To save your movie, with all of the associated chapter tracks, click the “Export Movie” button on the toolbar
- Have Fun!
