

DialogMagic 9 Release Notes

Note: For DialogMagic documentation and demo files, please download the DialogMagic 6 files from the New Millennium web site at –

<http://www.newmillennium.com>

Because of changes in FileMaker Pro 7 and later, DialogMagic is no longer able to automate FileMaker dialog controls. DialogMagic 9 still offers file control functions and several other miscellaneous functions, like GetMouseUp, etc.

We are maintaining DialogMagic 9 so developers who have converted (or want to convert) their solutions to FileMaker 7/8/9 will be able to use DialogMagic's file control functions without delay.

DialogMagic can be tested in demo mode (you must relaunch FileMaker after 30 minutes if you want to continue testing – see the DialogMagic 6 User Guide for more on demo mode). DialogMagic 9 cannot be registered with a DialogMagic 6 license key.

Please email any comments or bug reports to plug-ins@nmci.com. All feedback is appreciated!
