RELEASE NOTES

SIGNificant Offline Client 1.5.0.1

This is the first version of the SIGNificant Offline Client. Please read this document carefully.

SIGNificant Offline Client

On the Fly Signing

Features - Highlights

- **On the Fly Signing and Document Design:** The user can choose to sign a document instantly or define signers and signature fields according to his needs.

- **Template Recognition:** The SIGNificant Offline Client recognizes existing signature field indications on predefined templates automatically.

- **Biometric Signature Authentication**: The signature can be compared with the enrolled signature profile, using the organization's biometric engine when online connectivity is established.

- **Easy Navigation**: The signers' tree displays the signers and signature fields defined for the current document, enabling easy navigation between these fields.

- **Digital Signature**: Editing or adding any kind of information will result in invaliding the digital signature.

- **Convert to PDF:** SIGNificant Offline Client comes with a printer, which enables converting any printable content to PDF format.

- **Choice of Signing Method:** Documents either can be signed with a handwritten signature or with a personal certificate.

- **90 day trial period:** After installation you have a 90 day demo license which enables you to test the software instantly.

- **Send as Email**: send the PDF document via Email to any receipient by the click of one button.

Main screen

Features - Integration and Administration

- **Integration Capabilities**
  - The client can be called via command line and interprets "sig-strings" to support full integration into existing workflows or applications.
  - Customizable button/function into the client interface to add further custom functionality.
  - Designing functionality can be disabled to allow only signing

- **Software Rollout:** The Client supports silent installations for a companywide rollout with or without printer driver and license.

New features since version 1.0.1.1

- **"Save Copy as" button** is now available in the top toolbar. It saves the current document to a selectable location.

- **Configuration**: All buttons from the top toolbar can now be disabled via the config file

- **"Send as Email" button** is now available in the top toolbar. It takes the current document and adds it to a new email message in your default email client.

- **"Print" button** is now available in the top toolbar (previously in the bar below the document)

Fixed bugs since version 1.0.1.1

- **The field "Signer" is now empty** and does not contain the text "Unknown signer".

- **Configuration of the "defaultSigningMethod"** is now recognized when printing a document via the SIGNificant Offline Client printer

Known Issues

- When **updating from version 1.0.1.1** your configuration (user.xml and _global.xml) is overwritten. Your license is preserved but you are asked to confirm it during first startup.

- **Important note for users of beta versions:** Documents signed with beta versions don't contain biometric signature date and cannot be verified at a later point. Please upgrade to this released version as soon as possible.

- **Smartcards** support is experimental only. In any case it requires as middleware (e.g. Nexus Personal) which provides the certificate in the Windows Certificate Store. To sign with SHA-2 certificates you have to install XP SP3 or Windows Vista SP1.

- **Windows 64 bit** is not supported

- When **changing the signing tablet** (re-)install the appropriate tablet driver of your choice and reboot.

- **"sig-strings"** are not deleted when they are recognized and a signature field is created. Workaround: create the sig-strings in the same color as the background (e.g. white).

Installation Instructions

- **Note:**
  - For detailed installations instructions consult the "Administrator Guide" available via the Partnerweb.

- **Prerequisites:**
  - OS: Windows XP 32 bit, Windows Vista 32 bit, Windows 2003 Server 32 bit; .NET 2.0 installed
  - Signing Tablets: All USB Wacom Tablets and Wacom "penabled" Tablet PCs with Tablet Driver "5.08-2a" (cons5.08-2a_int.exe)
  - Administration privileges are required for installation and license configuration.

- **Start the installation** via double-clicking the file "SIGNificantOfflineClient_v1.5.0.1 .exe"

- **Start the client**. You can use it for 90 days without limitations. After that period you have to obtain a production license.
